

## HOW DO YOU KNOW WHAT SAFE IS RIGHT FOR YOUR CUSTOMER?

There are a lot of options, parts, pieces and features that are all designed to best protect the most important parts of their life. We understand the complexity behind some of our features, and we want to help make it easier for them to find what they need to protect their family and valuables. We will help you to learn about our peril protection, lock types, capacity options, and everything else you need to understand in order to help choose the best safe...

## PERIL PROTECTION

Our safes are designed to protect the important things from some of life's greatest and most unexpected dangers, including water, fire, and theft.

## WATER

**WATER DAMAGE** is one of the most common claims on home insurance and it is estimated that your home has a 26% chance of being damaged by a flood during the course of a 30-year period.  
(National Flood Insurance Program)

At SentrySafe, we understand that water damage can happen fast, furious and when it is least expected. That's why everyone needs to make sure those things that are important to them remain safe and dry! This is where we come in: SentrySafe is proud to offer different levels of waterproof and water-resistant technology to ensure the most treasured valuables are unscathed by the unwelcomed presence of water in the home.

The SentrySafe ETL Verified waterproof guarantee ensures that items that are placed in the SentrySafe Fire-Safe® Waterproof chest or file will remain dry even through extreme exposure to water. Our waterproof products are tested by being completely submerged for an hour in water that goes up to two inches above the uppermost surface of the chest or file. The product passes the test only if there are no more than .5 grams (8 drops) of water entered the safe!

## LOCK TYPE

There are many different lock types designed for different levels of security and convenience. Read below to help discern the differences.

### Key

With no combinations to remember this is the simplest way to secure your valuables.

### Mechanical Dial

This type of lock contains a 3 or 4 number factory set combination. One of the oldest and most basic forms of locking, mechanical dials are a trustworthy and reliable form of securing your possessions.

### Programmable Keypad

Digital locking system, usually 1-8 digit password. Also offers multiple user options available. Requires batteries. Not thrilled with the idea of turning a dial one way, than another, than back again, and having to remember a complicated trio of double-digits? This choice provides the option of choosing your own password, and then simply punching the buttons!

## ORGANIZATION

We have a solution to accommodate every organizational need. Whether it's letter size documents laying flat, hanging standard files, small electronics, jewelry, or digital media items, our safes offer a variety of interior storage configurations, accessories and features to help organize irreplaceable documents and valuables.

Visit [SentrySafe.com](http://SentrySafe.com) to help find the safe right for you.

### Paper Documents

Passports, birth certificates, marriage license, mortgage documents, insurance papers, wills, stocks & bonds, tax records, divorce papers, are top of the list of important and irreplaceable items to protect.

### Holds Paper Flat

Tired of finding papers bent, folded or wrinkled from being stored untidily? Papers can be stored flat and undamaged for crisp and neat retrieval of your important documents.

### Carrying Handle

If you ever need to move your SentrySafe product, the carrying handle can help you do this with ease and convenience. Just grab the handle and eliminate the awkward and uncomfortable problem of finding a grip and position to carry your chest!

### Files

Expense records, donations, health/flex card receipts, other medical records, school transcripts, business records, credit card records, bank account files can be stored for easy and convenient retrieval.

## SIZES

Our safes come in all different shapes and sizes. We are confident there is one that will fit their needs.

### Cubic foot capacity of 0.6 or less.

Perfect for passports, paper documents, cash, spare keys, jewelry, or small collectables.

### Cubic foot capacity of around 0.8.

Perfect for hanging file folders, paper documents, binders or larger collectables.

### Cubic foot capacity of 1.2 to 2.0

Perfect for storing multiple binders, cash drawers, hanging file folders, any size collectables and extra organizational features.

## FIRE

DID YOU KNOW that every 19 seconds a fire department in the United States is responding to a fire?  
(National Fire Protection Association)

SentrySafe offers the best fire protection in the business. In fact we invented fire-resistant storage containers 80 years ago. Our safes can withstand temperatures ranging from 1,550°F to 1,850°F.

Standard fire protection

Advanced fire protection

Extreme fire protection

Underwriters Laboratory (UL) tests are independent tests of SentrySafe Fire-Safe® products. For a product to earn a UL Classification, the documents/items stored inside must remain completely undamaged after being subjected to 1/2 hour (1550°F/843°C), 1 hour (1700°F/927°C) or 2 hours (1850°F/1010°C) of fire exposure. Only products with the Underwriters Laboratory (UL) mark have been tested to withstand these stringent conditions.

Different strength UL tests are required for paper, media and sensitive material storage. These tests, on top of the security that already comes with the SentrySafe brand name, provide the ultimate insurance that your possessions are safe from harm while inside a SentrySafe product.

In case that isn't enough, SentrySafe products also undergo ETL Semko testing. ETL Semko is an independent testing firm which verifies products are in compliance with the manufacturer's specifications for fire endurance.

### Impact

Select 1-hour and 2-hour safe models carry the UL Classification for fire-impact testing. The products are heated to specified temperatures (depending on the model) and then dropped 15 feet or 30 feet (depending on the model) onto rubble, cooled, inverted and reheated. In order to pass the test, the product must remain closed and the contents must be intact and usable. (Refer to owner's manual for specific models).

## SECURITY

AROUND 2 MILLION incidents of burglary occur every year. Of these, around 60% involve forcible entry and 60% are considered residential burglaries. Most of them occur in broad daylight – between 6 a.m. and 6 p.m. (Department of Justice)

There are few things more jarring than knowing an intruder has entered a home. But knowing valuables are safe from theft in a SentrySafe security product will help put their mind at ease!

Pry resistant

Solid steel construction

KEEP IT. SAFE.
